Your product range requires barcode verification?

Now this task may be performed by the EyeC Profiler® as well as checking for content errors and other flaws, as usual.

If equipped with the new Optional Barcode Inspection, without any additional time or effort, the EyeC Profiler® will automatically identify and locate all barcodes on your print sample, and inspect each particular barcode for compliance with either CEN / ANSI (ISO 15416) or the traditional spec (ISO 797). In addition, the barcode content can be verified.

If the inspection result exceeds your pre-defined limits, an alarm will be set so you can control and monitor the accuracy of your barcodes.

In addition, a barcode report is prepared, including all relevant measurements as specified in the applicable ISO code, such as

- Content
- Scan Reflectance Profile
- Edge Contrast
- Symbol Contrast
- Modulation
- Rmin
- Defect
- Decodability
- Bar Width Deviation

This option works with most existing standards such as EAN-13, EAN-8, UPC-A, UPC-E, Code 39, PZN, Code 25 Interleaved, Interleaved 2 of 5, Pharma, and others. Control and monitor your printed barcodes using the EyeC Profiler® and enjoy the benefits that come with enhanced customer satisfaction.
